GEOMETRY AND FORMAT

The piece

01 Front view

02 Three-quarter view

GYP-STD-014-A/B-01

References	GYP-STD-014-A-01, GYP-STD-014-B-01
Material	Fibre-reinforced plaster
Type	3D wall panel
Finish	Matt white · Fine mineral texture
Format	500 × 500 mm
Total thickness	10–30 mm
Maximum relief	20 mm
Reference weight	4.82–5.68 kg
Coverage per panel	0.25 m^2
Use	Interior cladding in dry areas
Finish as supplied	Matt white, ready to prime and paint
Panels per m^2	4 panels/m^2
Repeat	Two modules · A/B alternating, no rotation

DESIGN AND CONTINUITY

Relief in the space

Cladding detail

The motif

Two complementary modules extend curves of varying width. Alternating A/B creates a fluid sequence of broad bands and fine crests that changes with side light.

01 Laying

Alternate A and B horizontally and repeat the same sequence in every row, without rotating the pieces. Align the profiles and fill the joints with plaster, keeping the curves and the continuity of the relief.

02 Joints

Joints filled with plaster to form a continuous surface; keep the waves of the design.

03 Reaction to fire

In preparation: formulation intended for class A1. Collection technical data sheet and installation guide available to download from the design's web page.
