AXIA

GEOMETRIC / 90° ROTATIONS

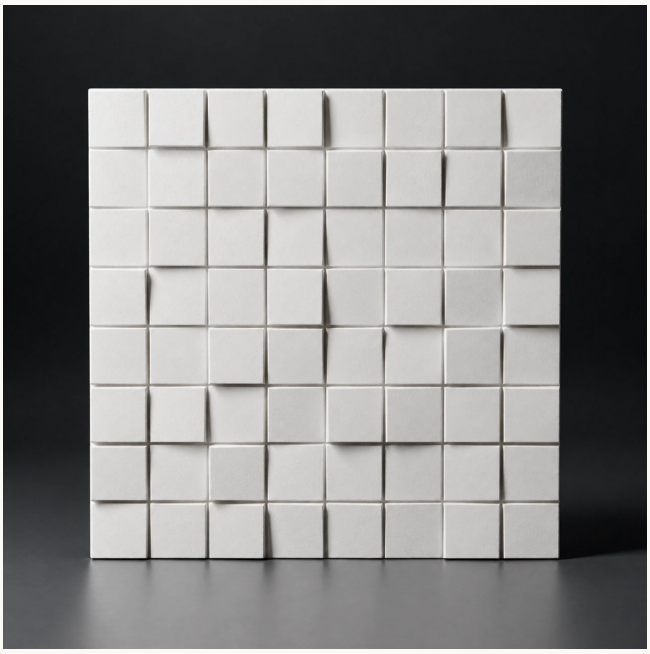

Sixty-four inclined planes create a grid that changes with the light.

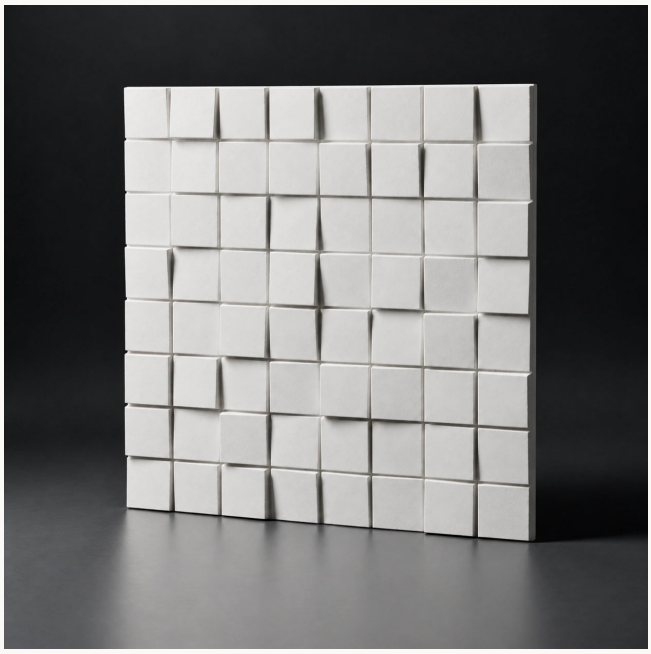

Setting

GEOMETRY AND FORMAT

The piece

01 Front view

02 Three-quarter view

GYP-STD-011-A-01

Material	Fibre-reinforced plaster
Type	3D wall panel
Finish	Matt white · Fine mineral texture
Reference	GYP-STD-011-A-01
Format	500 × 500 mm
Total thickness	10–25 mm
Maximum relief	15 mm
Reference weight	5.1–5.53 kg
Coverage per panel	0.25 m^2
Use	Interior cladding in dry areas
Finish as supplied	Matt white, ready to prime and paint
Panels per m^2	4 panels/m^2
Repeat	One module · 90° rotations

DESIGN AND CONTINUITY

Relief in the space

Cladding detail

The motif

A grid of eight by eight squares combines different inclines in a fine relief. Rotating the piece extends the composition and alternates light and shadow on white plaster.

01 Laying

Align the grid and follow the reference composition in the diagram: 270° and 180° at the top, 0° and 90° at the bottom. Fill the joints between pieces with plaster, keeping the channels and level changes that are part of the design.

02 Joints

Joints between pieces filled with plaster. Keep the grid channels and the inclines of the design.

03 Reaction to fire

In preparation: formulation intended for class A1. Collection technical data sheet and installation guide available to download from the design's web page.
